Kees van Leeuwen/Stef Koop

- The revised City Blueprint, together with the Trends and Pressures Framework has been applied to 50 cities and regions in 30 countries around the World
- It provides a clear, concise analysis of water, waste and climate change challenges in cities, identifying strategic gaps and providing a platform for city-city learning

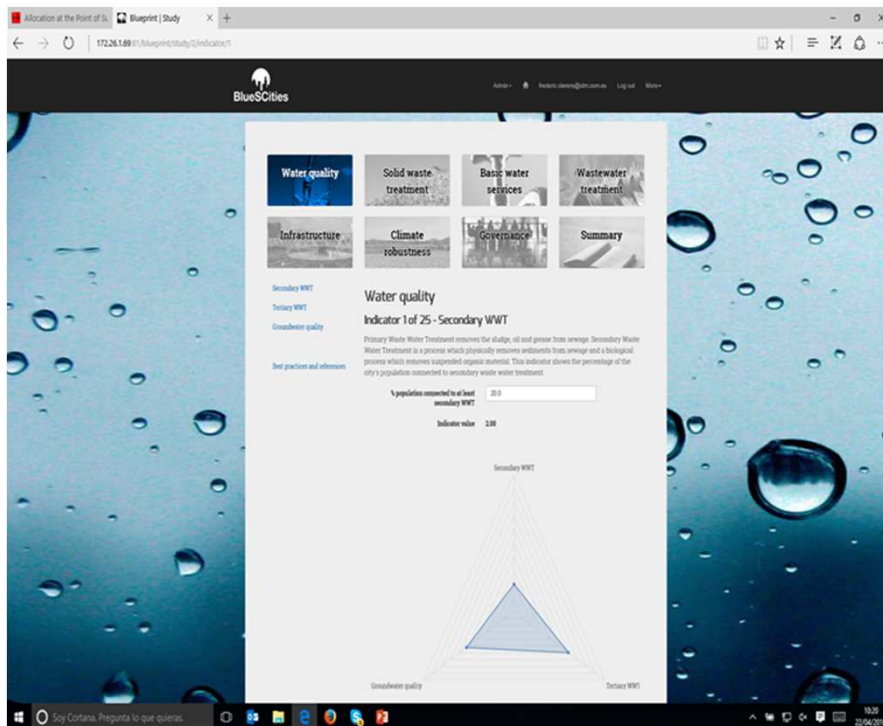

Bogumil Ulanicki/ Anna Strzelecka

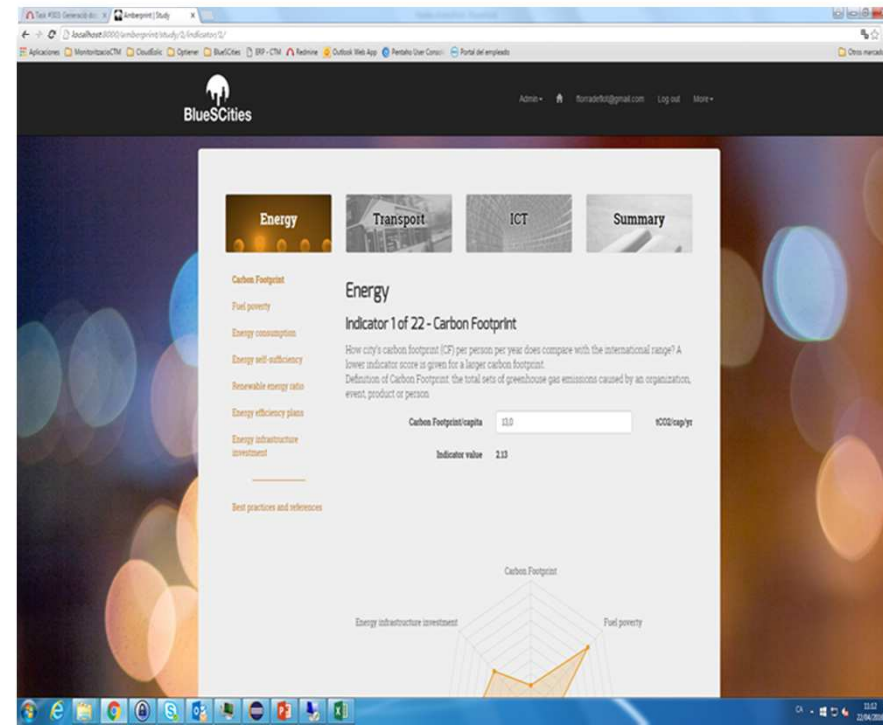

- The City Amberprint has been applied to Athens, Istanbul, Helsinki, Genoa, Leicester and Copenhagen.
- It is based on the City Blueprint concept and analyses the situation concerning ICT, transport and energy

BlueSCities works to facilitate the integration of water and waste within the Strategic Implementation Plan of the EIP Smart Cities and Communities

City Blueprint software

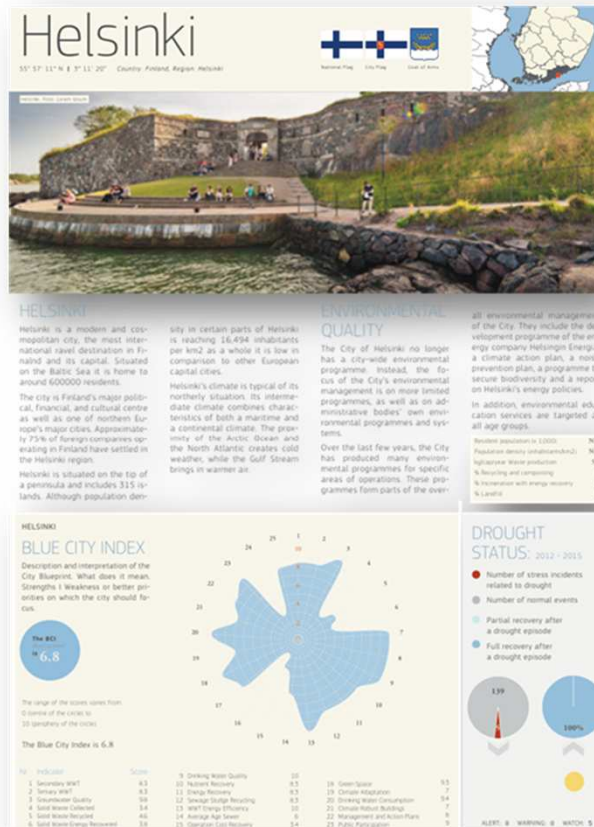

City Amberprint software

The Independent Analysis Software and the Practical Guidance Document facilitate a city to

1. Test its own management, policy and help to attain effective strategic policies
2. Compare with other cities, exchange knowledge, experience and best practices
3. Prioritize and synthesize sector goals and plans, to create sustainable communities

City-to-city knowledge sharing, citizen awareness and engagement, social consensus and the impact of water and waste within the smart city approach on technological, academic, economic, environmental and above all social sectors form part of the BlueSCities experience.
