

INCOVER Project (GA: 689242): Innovative Eco-Technologies for Resource Recovery from Wastewater

Target: Waste stream into a source of new added-value bio-products through 3 case-studies at demo scale.

ICT activity:

- Optical sensing through low-cost spectral imaging photodetectors for monitoring fatty acids, bioplastics and organic acids.
- Smart irrigation technology based on wireless sensor networks and communication devices.
- Holistic wastewater management approach through specific DSS methodology tailored to the INCOVER technologies.

Duration: June 2016 – May 2019
